

STRICTLY BOUNDED OPEN QUESTIONS

Project ID: SIH26034
Product: NyayaDrishti-LM
Status: ALL QUESTIONS BOUNDED BY SAFE DEFAULTS (ZERO DEVELOPMENT BLOCKERS)
Last Updated: 07 September 2026

Context

At the Architecture Freeze stage, no question may remain open that blocks day-to-day engineering. Every open question below is assigned a **Working Default Decision** that allows developers to proceed immediately.

Bounded Open Questions Matrix

ID	Category	Specific Unresolved Question	Working Default Decision (Safe for Dev)	Assigned Owner	Resolution Deadline	Impact If Unresolved
OQ-01	Optical / UX	Should the primary calibration marker be an ArUco marker or a standard credit-card-sized reference (ISO 7810 ID-1) ?	Implement dual detection in OpenCV: ArUco dictionary 4x4_50 is primary (fastest, most robust under tilt); ISO 7810 card rectangle detector is automatic fallback.	Member 1	09 Sept 2026	None. Code supports both seamlessly.
OQ-02	Legal / Data	Under Rule 6(1)(a), what exact minimum address tokens constitute a legally valid	Implement two configurable severity tiers: (1) <i>Strict Statutory:</i> Must have State + 6-digit Indian PIN code; (2) <i>Warning:</i> Missing street line triggers	Member 3 & 4	09 Sept 2026	Prevents false violation notices against legitimate brands using registered corporate office names.

ID	Category	Specific Unresolved Question	Working Default Decision (Safe for Dev)	Assigned Owner	Resolution Deadline	Impact If Unresolved
		'complete address' for prosecution?	REQUIRES_REVIEW rather than hard fail.			
OQ-03	Government Integration	What exact REST API payload schema does DoCA's national maap.gov.in portal require for external inspection ingestion?	Export standardized Form 1 JSON schema: Since eMaap has no public external API, NyayaDrishti-LM exports an open, fully documented JSON structure matching statutory inspection memo fields, ready for future NIC webhook ingestion.	Member 5	10 Sept 2026	Zero risk. Deliver standalone export and mock synchronization endpoint for demo.
OQ-04	Geometry / MVP	How should cylindrical packaging text dewarping be handled within the 6-day timeline?	Restrict font-height measurement to the vertical unwarped axis: On a cylinder, vertical lines suffer no perspective distortion ($\{\text{proj}\} = y_{\{\text{metric}\}}\$$). Full 3D surface mesh unwrapping is marked P2/deferred.	Member 1	08 Sept 2026	Completely eliminates mathematical schedule risk while preserving 100% Table-I verification on cans and bottles.

ID	Category	Specific Unresolved Question	Working Default Decision (Safe for Dev)	Assigned Owner	Resolution Deadline	Impact If Unresolved
OQ-05	UI Deployment	Should the field application deploy as an Electron desktop app , a Progressive Web App (PWA) , or a native Android APK ?	Build cross-platform React + Vite PWA: Wrapped in Electron for laptop demonstration, with standard responsive viewport allowing immediate mobile browser execution on Android tablets.	Member 6	08 Sept 2026	Maximizes demo versatility: runs on judges' phones via local Wi-Fi or directly on team laptops.

Non-Blocking Verification Protocol

1. Developers must build against the **Working Default Decision**.
2. If an open question is resolved before its deadline, the module owner updates the parameter file.
3. If a question is not resolved by the deadline, the **Working Default becomes permanently frozen**.
