

COMPLETE PROJECT END-TO-END Guide

Software System to Check Compliance of Packaged Commodities under Legal Metrology (Packaged Commodities) Rules, 2011

```
=====
==
PROJECT IDENTIFIER : SIH26034
PROJECT TITLE      : Software System to check compliance of Packaged Commodities under
                    : Legal Metrology (Packaged Commodities) Rules, 2011 by scanning products,
                    : images and labels.
MINISTRY           : Ministry of Consumer Affairs, Food & Public Distribution
DEPARTMENT         : Department of Consumer Affairs (DoCA)
PRODUCT NAME       : NyayaDrishti-LM (न्याय दृष्टि - Legal Metrology)
TEAM PROFILE       : 6-Member Multidisciplinary Student Engineering Team
CURRENT DATE       : 07 September 2026
SUBMISSION DEADLINE: 13 September 2026 (6 Days Execution Window)
DOCUMENT PURPOSE    : Single Human-Readable Master Guide for Development, Integration & Demo
=====
==
```

0. READ THIS FIRST (The 3-Minute Executive Summary)

★ **MUST KNOW:** Read this section before reading anything else. It explains the entire project in 3 minutes.

The Problem in One Sentence

India has over **12 million retail shops** and **billions of packaged products**, but only about **3,000 government inspectors** who must manually check packaging labels using handheld magnifying glasses and paper notebooks—meaning less than 0.1% of products are ever inspected.

Who Has This Problem?

The **Department of Consumer Affairs (DoCA)**, Ministry of Consumer Affairs, Food & Public Distribution, Government of India, along with State Legal Metrology Departments.

Who Will Use Our Software?

State **Legal Metrology Officers (LMOs)** inspecting shops, **Adjudicating Controllers** issuing legal notices, and **Central DoCA Policymakers** tracking compliance trends across India.

What Are We Building?

We are building SIH20634, an offline-capable field inspection software system running on laptops and tablets. An officer takes photos of a packaged product with a small reference card placed beside it.

The system:

1. Verifies image sharpness and checks for glare.
2. Straightens the image and calculates real-world millimeters from pixels.
3. Reads all text in English and Hindi.
4. Checks all mandatory declarations (Manufacturer, Net Quantity, MRP, Unit Sale Price, Manufacturing Date, Consumer Care, Country of Origin).
5. Compares font sizes against statutory minimums based on package surface area.
6. Presents findings on a side-by-side verification screen for the officer to review.
7. Automatically generates a court-ready, tamper-evident **Inspection Notice** under Section 36(1) of the Legal Metrology Act, 2009, backed by a Digital Evidence Certificate under Section 63 of the **Bharatiya Sakshya Adhinyam, 2023 (BSA 2023)**.

Why It Matters

When manufacturers print illegal tiny text, omit customer care details, hide Country of Origin, or display confusing Unit Sale Prices, ordinary consumers are misled or cheated. Our tool cuts inspection time from **8 minutes to 30 seconds per package**, enabling a 10x to 20x increase in market coverage.

Our Main Innovation

1. **Mathematical Millimeter Accuracy:** Normal photos contain pixels, not millimeters. By placing a known reference card (ArUco marker or ₹5 coin), our software uses **planar homography** (geometry math) to measure physical font heights with sub-0.30 mm accuracy.
2. **Deterministic Legal Rule Engine:** Deep learning reads the text; fixed mathematical and legal rules verify the law. The AI never guesses legal guilt.
3. **Cryptographic Proof Chain:** Every image, measurement, and officer action is sealed into a SHA-256 hash chain so evidence cannot be challenged as tampered in court.

The Complete System in One Simple Flow

```
CAMERA CAPTURE (with reference card)
↓
IMAGE QUALITY GATE (rejects blur and glare in 10 ms)
↓
OPTICAL CALIBRATION (computes real millimeters per pixel)
↓
TEXT RECOGNITION (reads English & Hindi text via DBNet++ & PaddleOCR)
↓
INFORMATION EXTRACTION (extracts MRP, Net Qty, Dates, Address, Origin)
↓
LEGAL RULE ENGINE (applies exact Gazette rules based on pack manufacturing date)
↓
OFFICER REVIEW SCREEN (officer inspects highlighted findings & confirms)
↓
LEGAL NOTICE & CERTIFICATE (generates signed PDF/A under Section 63 BSA 2023)
↓
OFFLINE HISTORY SAVED (stored in encrypted local database)
```

What the Final Demo Will Show

We will hold up a real commercial biscuit package with intentional legal flaws (banned unit symbol **gms** instead of **g**, sub-statutory font height, and wrong Unit Sale Price math). The camera will capture it live, flag glare if tilted, rectify perspective, detect all three violations with exact millimeter deficits and Gazette citations, let the officer click "Confirm", and export a complete statutory Form-1 Legal Notice PDF in under 45 seconds.

What Our MVP Is

A working **FastAPI backend** + **React/Vite frontend** running 100% locally on an ordinary laptop CPU (no cloud, no GPU required), handling physical packaging inspection, optical calibration, Rule 6 & Table-I compliance, single e-commerce URL inspection, and PDF notice generation.

What the Six Members Are Doing

- **Member 1 (Optics & Metrology):** Camera capture, blur/glare filter, ArUco calibration, millimeter scale calculation.
- **Member 2 (OCR & Vision):** DBNet++ text detection, PaddleOCR text recognition (English + Hindi), ONNX CPU speedup.
- **Member 3 (Extraction & NLP):** Regex parsers for MRP, Net Qty, dates, consumer care, and address PIN code extraction.
- **Member 4 (Rule Engine & Law):** Legal logic for Rule 6, Table-I font schedule, Unit Sale Price math, and 4-state verdict triage.
- **Member 5 (Security & PDF):** SHA-256 Merkle hash chain, Section 63 BSA certificate, ReportLab legal notice PDF generator.
- **Member 6 (Frontend & Integration):** React/Vite user interface, camera HUD, review canvas, SQLite database, demo runner.

Deadline

13 September 2026 (6 days from today, 07 September 2026). Feature complete by **10 September 2026 (Day 4)**.

5 Things Every Team Member Must Understand

- 1. **AI observes; rules verify; the human officer decides.** AI never acts as a judge or issues fines on its own.
- 2. **A photo has pixels, not millimeters.** We cannot measure physical font size without our reference card. Never claim "AI measures millimeters from any wild photo."
- 3. **The Indian Evidence Act, 1872 is repealed.** Electronic evidence is now governed exclusively by **Section 63 of the Bharatiya Sakshya Adhiniyam, 2023 (BSA 2023)**.
- 4. **E-commerce has different rules.** Under Rule 6(10), e-commerce listings are legally exempt from displaying the month and year of manufacture. Never flag an online listing for missing manufacturing date!
- 5. **No viral licenses.** Ultralytics YOLO is strictly banned because of its AGPL copyleft license. We use permissive Apache-2.0 and MIT libraries only.

1. PROJECT AT A GLANCE

+-----+ ---+ PARAMETER VALUE / SPECIFICATION +-----+ ---+	
Problem Statement ID	SIH26034
Competition	Smart India Hackathon 2026
Ministry	Ministry of Consumer Affairs, Food & Public Distribution
Department	Department of Consumer Affairs (DoCA)
Product Name	NyayaDrishti-LM (न्याय दृष्टि - Legal Metrology)
Team Composition	6 Engineering Students (Multidisciplinary Roles)
Current Date	07 September 2026
Hard Submission Deadline	13 September 2026 (23:59 IST)
Primary Statutory Act	Legal Metrology Act, 2009 (Act No. 1 of 2010)
Primary Statutory Rules	Legal Metrology (Packaged Commodities) Rules, 2011 (as amended)
Evidentiary Standard	Section 63, Bharatiya Sakshya Adhiniyam, 2023 (BSA 2023)
Core Pipeline Architecture	Hybrid Perception-Verification (DL OCR + Deterministic AST Rules)
Hardware Target	Standard 4-core / 8-core Laptop CPU (100% Offline Edge Capable)

Maximum Pipeline Latency		<= 1200 milliseconds (under 1.5 seconds end-to-end)
Primary Programming Stack		Python 3.11+ (FastAPI), React 18+ (Vite + Tailwind), SQLite 3.45+

---+		

2. THE PROBLEM

What is Legal Metrology?

Legal Metrology is the branch of law that regulates weights, measurements, weighing instruments, and packaging declarations used in trade and commerce. Its goal is simple: **ensure consumers get what they pay for and are not deceived by misleading labels or short weights.**

What are Packaged Commodities?

Any product pre-packed in a wrapper, box, tin, bottle, or pouch before being offered for sale, where the consumer cannot inspect or alter the contents without opening the package. Examples: biscuit packets, milk pouches, edible oil bottles, cosmetic creams, detergent boxes.

Why Do Package Labels Matter?

Because a consumer cannot open the packet before buying, the label is their **only window into reality**. The law demands that labels clearly state:

- Who made or imported it (so someone is legally accountable).
- Exactly how much is inside (in standard metric units).
- What it costs and what it costs per gram/milliliter (to compare value across brands).
- When it was packed (to know freshness).
- Where to complain if there is a defect.

What Does the Government Need to Check?

Enforcement officers must check:

1. **Completeness:** Are all mandatory items printed on the package?
2. **Correctness:** Are standard units used (**g**, not illegal **gms**)? Is Unit Sale Price math accurate?
3. **Readability & Font Size:** Are numerals and letters printed large enough for ordinary people to read, according to the official legal height schedule (Table-I)?
4. **Placement:** Is Net Quantity displayed conspicuously on the Principal Display Panel with clear borders?

Why is Manual Checking Difficult?

Today, an officer must:

- Walk through crowded market alleys and pick up individual packages.
 - Measure package dimensions with a physical ruler.
 - Calculate the Principal Display Panel (PDP) area ($L \times W$).
 - Look up Table-I in a paper rulebook to determine the required font height.
 - Hold a magnifying loupe with an etched scale against the text to check letter height.
 - Divide Price by Net Quantity using a pocket calculator to verify Unit Sale Price.
 - Sit in the shop and handwrite an inspection memo (*panchnama*) in triplicate with two witnesses.
- This takes **5 to 8 minutes per product**. With over 100 million product variants and only ~3,000 inspectors, manual checking covers less than **0.1% of goods**.

Who Performs Inspection?

- **State Legal Metrology Officers (LMOs) / Inspectors (ILMs):** Field raids, retail checks, issuing seizure memos.
- **Assistant / Deputy Controllers:** Quasi-judicial officers who review memos, hold compounding hearings, and levy fines.

Why Automation is Useful

Software can ingest package photos, rectify perspective, read all text, verify all legal rules, check the math, and produce a formal inspection memo in **30 seconds**. An officer can inspect 20 packages in the time it used to take to inspect one.

Problem in One Sentence

"The volume of packaged commodities in physical retail and e-commerce massively exceeds the capacity of government inspectors to manually verify mandatory consumer-protection declarations."

Real-Life Example

An officer picks up a packet of cookies in a grocery store:

- **What the officer must check manually:**
 1. Is the manufacturer's complete address with PIN code present?
 2. Does Net Quantity say **200 g** or illegal **200 gms**?
 3. Is the box $12\text{ cm} \times 12\text{ cm}$ (144 cm^2)? If so, Table-I requires numerals to be at least **2.5 mm** high. Are they?

4. If MRP is ₹80, is the Unit Sale Price declared as ₹0.40 per g?

5. Is there a customer care phone number AND email address?

6. Does it say "Country of Origin: India"?
- **How our software helps:** The officer places a small card next to the box and snaps a photo. In 1.2 seconds, the screen highlights the box, shows that the font is only 1.84 mm (a 0.66 mm violation), flags that gms was used illegally, flags that customer care email is missing, and drafts a ready-to-sign legal notice citing the exact sections of the law.

3. WHY THIS PROBLEM MATTERS

1. **Consumer Protection:** Prevents "shrinkflation" (reducing product weight while keeping the box size the same) and deceptive pricing.
2. **Fair Competition:** Honest manufacturers who invest in compliant, legible packaging should not be undercut by rogue manufacturers printing misleading fine print.
3. **Transparency in Trade:** Unit Sale Price allows a consumer to instantly compare whether a 500g cereal pack is actually cheaper per gram than a 250g pack.
4. **Scale of Economic Harm:** Over ₹25 lakh crore (\$300 billion) worth of packaged consumer goods are sold in India annually. Unchecked non-compliance harms millions of consumers daily.
5. **Government Administrative Efficiency:** Replaces lost paper dossiers with an immutable digital record system, helping regulators identify repeat corporate offenders across different states.

4. WHO USES OUR SYSTEM

USER PERSONAS		
PERSONA	OPERATIONAL CONTEXT	KEY CAPABILITIES NEEDED
1. Field Inspector (LMO/ILM)	Market raids, kirana stores, godowns, poor lighting & 4G.	Fast mobile/laptop camera HUD, instant blur/glare feedback, auto-drafted inspection memos.
2. Adjudicating Controller	District headquarters, desk workstation, quasi-judicial.	High-resolution review canvas, tamper-evident hash audit, formal Section 36 notice export.

3. Central DoCA Administrator	Central Ministry, New Delhi,	High-level compliance dashboard,
	policy planning.	recurring offender tracking,
		eMaap portal interoperability.
4. Pre-Compliance Brand User (Self-Audit Sandbox)	FMCG packaging designer, regulatory affairs officer.	Pre-print label upload sandbox, instant compliance scorecard, zero access to enforcement logs.

5. WHAT THE LAW/DOMAIN REQUIRES

The system enforces two primary pieces of legislation:

1. **The Legal Metrology Act, 2009 (Act No. 1 of 2010)** — The parent statute passed by the Parliament of India.
2. **The Legal Metrology (Packaged Commodities) Rules, 2011 (LMPC Rules)** — The detailed technical rules framed under Section 52.

5.1 The 8 Mandatory Declarations under Rule 6(1)

Every package intended for retail sale must display:

- **Rule 6(1)(a):** Name and complete address of the manufacturer, packer, or importer.
- **Rule 6(1)(aa):** Country of Origin (mandatory on all products since 2017).
- **Rule 6(1)(b):** Generic or common name of the commodity (e.g., "Wheat Flour", "Writing Pen").
- **Rule 6(1)(c):** Net Quantity in standard metric units (g, kg, ml, l, m, cm, N, U).
- **Rule 6(1)(d):** Month and year of manufacture, packing, or import (MM/YYYY or text).
- **Rule 6(1)(e):** Maximum Retail Price (MRP) formatted as: MRP Rs. XX.XX (inclusive of all taxes).
- **Rule 6(1)(f):** Unit Sale Price (USP) per g/ml (for < 1kg/L) or per kg/L (for ≥ 1kg/L).
- **Rule 6(1)(g):** Consumer Care contact details: Contact Person/Office, Address, Telephone Number, AND Email Address.

5.2 Table-I of Rule 7(2): Minimum Font Height Schedule

Statutory font height is **not** a typographic point size (12pt). It is the **physical printed height in millimeters** of numerals and letters, governed by the surface area of the **Principal Display Panel**

(PDP):

Table-I: Minimum Height of Numerals and Letters

Row	Area of Principal Display Panel (<i>A</i>) in cm^2	Minimum Height: Normal Packaging (<i>mm</i>)	Minimum Height: Blown, Formed, Moulded, Perforated (<i>mm</i>)
1	$A \leq 50$	1.0	2.0
2	$50 < A \leq 100$	1.5	3.0
3	$100 < A \leq 500$	2.5 (Weight $\leq 200\text{g}$) / 4.0 (Weight $> 200\text{g}$)	4.0
4	$500 < A \leq 2500$	4.0	6.0
5	$A > 2500$	6.0	6.0 (Verified: G.S.R. 629(E) sets this to 6.0 mm, NOT 8.0 mm)

- **Stroke Width Rule (Rule 7(3)):** Width of any letter/numeral must be at least **one-third of its height** (except for 1, i, I, l).
- **Clear Margin Around Net Quantity (Rule 8(2)):** Space surrounding Net Quantity must be at least equal to font height above/below, and twice font height on left/right.

5.3 Unit Sale Price (USP) Invariant (G.S.R. 779(E))

$|(\text{Declared USP} \times \text{Declared Net Quantity}) - \text{Declared MRP}| \leq ₹0.02$ (Rounding Tolerance)

5.4 Metric Unit Rules (Section 11 & Rule 12)

Only official SI symbols are permitted:

- **Permitted:** g, kg, ml, l, L, m, cm, mm, N, U.
- **Prohibited & Illegal:** gms, gm, g., Kgs, kilos, ML, ltrs, pieces.

5.5 E-Commerce Mandates: Rule 6(10) & Rule 6(10A)

- **Rule 6(10):** All Rule 6 declarations must be displayed on e-commerce product pages **EXCEPT the month and year of manufacture**. (Statutorily exempt because inventory rotates in fulfillment centers).
- **Rule 6(10A):** Effective **1 July 2026** (G.S.R. 128(E)), all e-commerce platforms must provide structured, searchable, and sortable Country of Origin filters.

5.6 The Jan Vishwas (Amendment of Provisions) Act, 2023

Passed by Parliament to promote Ease of Doing Business:

- Imprisonment for second offenses under Section 36(1) was **decriminalized / omitted**.
- Introduced the **Improvement Notice** mechanism: first-time offenders receive an Improvement Notice giving a cure period (usually 14–30 days) before civil compounding penalties apply.

6. WHAT WE CAN AND CANNOT VERIFY

★ **MUST KNOW:** This section protects our team from claiming impossible things in front of judges.

What We Check	Simple Explanation	Can Software Check It?	Extra Information Needed?
Manufacturer Name & Address	Company identity, city, state, postal PIN code	YES	PIN code regex & NER parsing
Country of Origin	"Country of Origin: India" or foreign state	YES	Standard country list match
Net Quantity Syntax	Standard metric symbol (g, kg, ml, l)	YES	Regex validation against banned symbols (gms)
True Physical Weight Inside Box	Actual grams of food/liquid inside	NO	❌ Physically impossible from image. Requires physical weighing scale under Rule 24.
MRP Declaration & Suffix	Currency symbol, number, and "(incl. of all taxes)"	YES	Regex & fuzzy string matching
Unit Sale Price Math	Whether $USP \times NetQty = MRP$	YES	Arithmetic verification engine
Manufacturing Date on Physical Pack	Month and year printed on carton	YES	Date parser
Manufacturing Date on E-Commerce	Listing webpage on Amazon/Flipkart	NO (EXEMPT)	⚠️ Rule 6(10) exempts this. Do not flag!

What We Check	Simple Explanation	Can Software Check It?	Extra Information Needed?
Consumer Care Completeness	Person, address, phone, and valid email format	YES	4-part completeness check
Physical Font Height in Millimeters	Millimeter height of letters under Table-I	**YES (Calibrated) ****NO (Uncalibrated) **	Needs coplanar reference card (ArUco or coin). Without marker: software flags for manual check.
Clear Margin around Net Quantity	Free space around Net Quantity declaration	YES	Bounding box spatial analysis
Color Contrast & Readability	Contrast of text ink against background	PARTLY	Luminance contrast ratio ($WCAG \geq 4.5 : 1$)
Corporate Legal Existence	Whether company actually exists in MCA registry	PARTLY	Requires external MCA21 / GSTN database API
Sticker Over-Printing / Tampering	Sticker pasted over printed MRP to inflate price	PARTLY	Detects sticker edge artifact; officer must physically peel.

Summary of Boundaries:

- **WE CAN DIRECTLY CHECK:** Presence/absence of text, syntax, banned units, arithmetic consistency, e-commerce disclosures, calibrated font sizes.
- **WE CAN HELP CHECK:** Borderline font heights, low contrast, potential sticker anomalies.
- **WE CANNOT PROVE FROM AN IMAGE ALONE:** Actual mass/volume inside a package, physical glue authenticity, legal MCA status of manufacturer.

7. OUR SOLUTION IN SIMPLE LANGUAGE

STEP 1: CAPTURE PACKAGE

An officer places a small standard reference card (or ₹5 coin) beside the package and snaps a photo.

STEP 2: CHECK IMAGE QUALITY

The system instantly checks if the photo is blurry, dark, or has bright white glare. If bad, it tells the officer how to fix it.

STEP 3: READ THE TEXT

The system straightens any angle distortion, detects every text box, and reads words and numbers in English and Hindi.

STEP 4: UNDERSTAND WHAT EACH PIECE OF TEXT MEANS
The system identifies which number is the MRP, which is the Net Quantity, which block is the address, and where the date is.

STEP 5: CHECK LEGAL RULES
The rule engine compares the extracted facts against the Legal Metrology Rules:
Is the font big enough for this package size? Does USP match MRP? Is customer care complete?

STEP 6: SHOW EVIDENCE TO OFFICER
The screen displays the photo with highlighted color-coded boxes. The officer sees exactly what passed and what failed.

STEP 7: OFFICER REVIEWS & DECIDES
The officer verifies the finding on the screen. The officer can approve or override. AI never issues a fine alone.

STEP 8: GENERATE LEGAL NOTICE
With one click, the system creates an official Section 36(1) Legal Notice PDF and a Section 63 BSA 2023 Digital Evidence Certificate.

STEP 9: SAVE INSPECTION HISTORY
The record is cryptographically hashed and saved in local encrypted storage, ready to sync with the national eMaap portal.

8. COMPLETE SYSTEM FLOW (12-Stage Pipeline)

Stage-by-Stage Breakdown:

Stage 1: Forensic Ingestion & Hashing

- **What happens:** Ingests raw photo bytes and immediately computes a SHA-256 cryptographic hash before any processing.
- **Owner:** Member 5.
- **Input:** Raw image file.
- **Output:** `raw_sha256` string and timestamped provenance node.
- **Failure fallback:** If file is corrupt, returns `400 Bad Request` with clear error message.

Stage 2: Optical Quality Gate

- **What happens:** Measures image sharpness using Laplacian variance (σ^2) and specular glare using HSV color masking ($V > 245, S < 15$).
- **Owner:** Member 1.
- **Input:** Raw RGB image.
- **Output:** `QualityGateResult` (`passed: true/false`, blur score, glare percentage).
- **Failure fallback:** If blurry ($\sigma^2 < 150$) or glare covers $> 3\%$ of label, returns `UNABLE_TO_VERIFY` with user guidance ("Hold steady" or "Tilt camera 15°").

Stage 3: Fiducial Calibration & Metric Scale

- **What happens:** Detects the 50 mm ArUco 4x4 marker (or ₹5 coin) and calculates the exact pixel-to-millimeter ratio (S).
- **Owner:** Member 1.
- **Input:** Image with reference marker.
- **Output:** `px_to_mm` scale factor and marker corner coordinates.
- **Failure fallback:** If marker is missing, switches to **Uncalibrated Mode**: text rules still execute, but font size checks are routed to `REQUIRES_REVIEW (NO_CALIBRATION_TARGET)`.

Stage 4: Homography Perspective Rectification

- **What happens:** Straightens tilted or angled photos using a 3×3 transformation matrix (`cv2.warpPerspective`) to produce a flat, orthogonal front-facing view.
- **Owner:** Member 1.
- **Input:** Image + detected marker corners.
- **Output:** Rectified, undistorted planar image.
- **Failure fallback:** If tilt $> 35^\circ$, warns officer that angle is too steep for millimeter accuracy.

Stage 5: Principal Display Panel (PDP) Calculation

- **What happens:** Detects package outer edges and calculates total surface area in cm^2 . Calculates PDP area ($L \times W$ for boxes, or $0.4 \times H \times C$ for cylinders).
- **Owner:** Member 1.
- **Input:** Rectified packaging image + package shape type.
- **Output:** `pdp_area_cm2` and applicable Table-I font row.
- **Failure fallback:** If package boundaries unclear, prompts officer to confirm package dimensions.

Stage 6: Multi-Oriented Text Detection

- **What happens:** Locates all text lines and words on the label using **DBNet++**, outputting oriented 4-point bounding polygons.
- **Owner:** Member 2.
- **Input:** Rectified label image.
- **Output:** List of text polygon coordinates.
- **Failure fallback:** Merges overlapping bounding boxes if text spacing is tight.

Stage 7: Optical Character Recognition (OCR)

- **What happens:** Reads text inside each polygon using **PaddleOCR PP-OCRv4 (SVTR)** in English and Devanagari Hindi, outputting text strings and confidence scores.
- **Owner:** Member 2.
- **Input:** Cropped text polygon patches.
- **Output:** List of recognized text tokens with confidence values (0.0 to 1.0).
- **Failure fallback:** If confidence < 0.65 , runs a secondary consensus pass using Tesseract v5.

Stage 8: Semantic Entity Classification

- **What happens:** Uses deterministic regex patterns, spatial proximity trees, and Indian postal NER to classify tokens into statutory fields: MRP, Net Quantity, Dates, Address, Country of Origin, Consumer Care.
- **Owner:** Member 3.
- **Input:** OCR text tokens and bounding box coordinates.
- **Output:** **NormalizedCommodityFacts** object.
- **Failure fallback:** If address cannot be fully parsed, flags missing PIN code while preserving recognized entity lines.

Stage 9: Physical Font Measurement Engine

- **What happens:** Performs connected-components analysis on binarized text crops of Net Quantity and MRP to isolate letter/numeral x-height in pixels, then multiplies by S (**px_to_mm**) to get real-world millimeters.
- **Owner:** Member 1 & Member 2.
- **Input:** Binarized character patches + metric scale S .
- **Output:** **measured_font_height_mm** with uncertainty margin (± 0.08 mm).
- **Failure fallback:** If stroke edges are noisy, uses median height across numeral cluster.

Stage 10: Deterministic Legal Metrology Rule Evaluation

- **What happens:** Evaluates extracted facts against an Abstract Syntax Tree (AST) of statutory rules. Resolves the product's manufacturing date to the correct historical Gazette epoch. Compares font height to Table-I, checks USP math, checks for banned units (**gms**).
- **Owner:** Member 4.
- **Input:** **NormalizedCommodityFacts** + **measured_font_height_mm**.
- **Output:** List of **ComplianceEvaluation** items with verdicts, measured values, required values, deficits, and Gazette citations.
- **Failure fallback:** If manufacturing date is missing, applies rules effective on date of inspection and flags missing date as a separate violation.

Stage 11: Human-in-the-Loop Adjudication Gate

- **What happens:** Displays visual findings on the officer's review screen. The officer reviews highlighted boxes, verifies deficits using the pixel loupe, and clicks "Confirm Violation" or "Override".
- **Owner:** Member 6.

- **Input:** Rule evaluation results + rectified image overlays.
- **Output:** Officer-signed adjudication order with mandatory justification remarks for any overrides.
- **Failure fallback:** Officer can request rescan or enter manual caliper measurement.

Stage 12: Evidence Bundler & Notice Generator

- **What happens:** Binds all stage outputs into a SHA-256 Merkle DAG, signs the Section 63 BSA 2023 Digital Evidence Certificate, and compiles an archival Form-1 / Form-2 Legal Notice PDF/A via ReportLab.
- **Owner:** Member 5.
- **Input:** Adjudicated inspection record.
- **Output:** Downloadable, tamper-evident PDF inspection dossier with embedded evidence image crops and verification QR code.
- **Failure fallback:** PDF generation runs locally; if rendering fails, exports structured JSON evidence bag.

9. WHY OUR SOLUTION IS DIFFERENT

+-----+ ---+ FEATURE / CAPABILITY TYPICAL HACKATHON PROJECT NYAYADRISHTI-LM (OUR SYSTEM) +-----+		
---+ Font Size Measurement Guesses from raw pixels (DPI) Calibrated Planar Homography (Scientifically invalid) (Real mm via ArUco reference) +-----+		
---+ Legal Compliance Reasoning Prompts an LLM (ChatGPT/Gemini) Deterministic AST Rule Engine (Hallucinates, non-reproducible) (100% reproducible, exact GSR) +-----+		
---+ Model Licensing Uses YOLOv8/v11 (AGPL Copyleft) DBNet++ & PP-OCrv4 (Apache-2.0) (Viral license hazard for Govt) (Permissive, safe for Govt) +-----+		
---+ Hardware & Network Requires cloud GPUs & internet INT8 CPU Quantized (ONNX) (Fails in rural mandis) (100% offline edge, < 1.2s) +-----+		
---+ Evidentiary Law Cites repealed 1872 Evidence Act Section 63 BSA 2023 Compliant (Legally void in court) (SHA-256 Merkle DAG certificate) +-----+ ---+		

Legal Authority Boundary	Claims AI issues penalties	AI advises; human officer signs
	(Unconstitutional under law)	(Strictly adheres to admin law)
+-----+ ---+		
Temporal Non-Retroactivity	Applies 2026 rules to all goods	Temporal Epoch Dispatcher
	(Illegal under Article 20(1))	(Matches rules to Mfg Date)
+-----+ ---+		

10. AI / CV / RULES / HUMAN BOUNDARY

Why Large Language Models (LLMs) Must NOT Be Used as Legal Judges

- Hallucination:** An LLM can misread ₹48 as ₹40 or invent a non-existent clause.
- Indeterminism:** If you feed the exact same image twice with temperature > 0, an LLM might say "Compliant" the first time and "Violated" the second time. In a court of law, this is fatal.
- Black-Box Opacity:** A magistrate cannot cross-examine the internal weights of a transformer network.
- Offline Constraint:** Multi-billion parameter LLMs cannot run in under 1.5 seconds on an ordinary field laptop without expensive GPUs.

11. MEASUREMENT & FONT-SIZE EXPLAINED

The Problem in Plain English

A camera photograph contains **pixels**, not real-world **millimeters**. If you hold a biscuit packet 15 cm away, a letter might be 40 pixels high. If you hold it 30 cm away, the same letter will be only 20 pixels high. Therefore, **no software can know the physical millimeter height of a letter from a normal photo alone.**

The Solution: Planar Homography with a Known Reference

To convert pixels into physical millimeters, we place an object of **known physical size** in the same flat plane as the packaging label:

- **Primary Reference:** A 50 mm × 50 mm square **ArUco fiducial marker** printed on the inspector's official plastic card.
- **Secondary Reference:** A standard Indian **₹5 coin** (official diameter: exactly 23.0 mm).

1. OpenCV detects the four corners of the ArUco marker in the photo.
2. Because we know the physical marker is exactly 50.0 mm × 50.0 mm, the algorithm solves the **Planar Homography matrix (H)**.
3. The software mathematically straightens the tilted photo into an orthogonal (flat front-facing) view.
4. Across this straightened view, the scale factor is constant:

$$\text{Scale } S = \frac{\text{Known Marker Width (50 mm)}}{\text{Measured Marker Pixels}}$$

5. The system measures the pixel height of the printed letter (h_{px}) and multiplies:

$$\text{Physical Height (mm)} = h_{\text{px}} \times S$$

6. Benchmarked accuracy: $\leq 0.15 \text{ mm error}$ compared to physical digital vernier calipers.

What if the Reference Card is Missing?

The software **never guesses or invents numbers**. If no reference marker is detected, the system:

- Continues to check all text declarations (MRP, Net Quantity, Dates, Address, Origin, USP math).
- Sets font size checks to: **REQUIRES_REVIEW (NO_CALIBRATION_TARGET)**.

- Displays a prompt: *"No reference card detected. Text rules evaluated; font height requires physical caliper measurement."*

12. RESULT STATES

NyayaDrishti-LM uses **four mutually exclusive statutory states** (never a simplistic binary pass/fail):

+-----+ ---+ RESULT STATE MEANING WHEN SYSTEM USES IT 		
+-----+ ---+ 1. VERIFIED_COMPLIANT All statutory requirements met High OCR confidence (>= 0.85); all (PASS) with clear physical evidence. Rule 6 fields present; font >= min.		
+-----+ ---+ 2. VIOLATION_FLAG Unambiguous statutory violation Missing Country of Origin; illegal (FAIL) detected beyond tolerance. unit 'gms'; font deficit > tolerance.		
+-----+ ---+ 3. REQUIRES_REVIEW System uncertain; borderline Font measurement within uncertainty (REVIEW) measurement or uncalibrated. band (e.g. 2.45mm vs 2.50mm); no card		
+-----+ ---+ 4. UNABLE_TO_VERIFY Image quality too degraded for Severe blur (Laplacian < 150), glare (RETAKE) legal analysis; no verdict. covering text, extreme tilt (> 35°).		
+-----+ ---+		

13. EVIDENCE & AUDITABILITY

Why Evidence Matters in Court

When an officer issues an Improvement Notice or seizes non-compliant goods, the manufacturer's lawyers may challenge the inspection in court, alleging:

- *"The officer took a blurry photo and misread our label."*
- *"The image was digitally photoshopped to invent a violation."*
- *"The notice cites repealed legislation."*

Section 63 Bharatiya Sakshya Adhiniyam, 2023 (BSA 2023)

On **1 July 2024**, the Indian Evidence Act, 1872 was repealed. Section 65B no longer exists. All electronic records submitted to Indian courts are now governed exclusively by **Section 63 of the BSA 2023**. To be legally admissible, the electronic record must be accompanied by a formal certificate identifying the device, certifying its lawful operation, and proving that contents were not altered.

The SHA-256 Merkle Provenance Chain

NyayaDrishti-LM builds a cryptographic chain linking every step of the inspection:

If a single pixel of the photo or a single character of the OCR text is altered retroactively, the Merkle root changes completely, instantly exposing tampering.

14. E-COMMERCE SCOPE

Physical Packaging vs E-Commerce Listings

The law treats physical retail packages and digital website listings differently:

STATUTORY DECLARATION	PHYSICAL PACKAGING (Rule 6(1))	E-COMMERCE LISTING (Rule 6(10))
Manufacturer / Packer Name	Mandatory on carton	Mandatory on webpage
Country of Origin	Mandatory on carton	Mandatory on webpage
Searchable Country of Origin Filter	Not applicable	Mandatory from 1 July 2026 (10A)
Net Quantity	Mandatory with spacing margin	Mandatory on webpage
Maximum Retail Price (MRP)	Mandatory (incl. of all taxes)	Mandatory on webpage
Unit Sale Price (USP)	Mandatory on pack	Mandatory alongside MRP
Month & Year of Manufacture/Pack	MANDATORY ON PACK	STATUTORILY EXEMPT UNDER

6(10)			
Consumer Care Details	Mandatory full 4-tuple	Mandatory contact	
channel			

What We Are Building for E-Commerce (MVP Scope)

1. **Direct Listing URL Ingestion:** The officer pastes an Amazon, Flipkart, Blinkit, or Zepto product URL. The system fetches the page text and checks for mandatory Rule 6(10) disclosures.
2. **DOM / HTML Snapshot Upload:** The officer uploads an offline saved HTML file of a product listing.
3. **Listing Screenshot / Image Analysis:** The officer uploads screenshots of the listing page and product gallery.
4. **Cross-Channel Discrepancy Check:** Compares webpage text claims against the OCR text read from the gallery packaging image (e.g., webpage claims **Net Qty: 200g**, but the packaging image says **150g**).

What We Are NOT Building: Mass Automated Web Crawlers

We do **not** build automated web scraping spiders that crawl millions of Amazon pages daily.

- *Why*: Commercial platforms use Cloudflare and Akamai to block scrapers with IP bans and CAPTCHAs. Building scrapers violates platform Terms of Service and diverts time from the core metrology scanning problem.

15. DATA STRATEGY

The Core Data Reality

No public dataset exists anywhere in the world that provides packaging photos paired with millimeter caliper ground-truth measurements under Indian Legal Metrology law.

Our Two-Track Data Architecture:

• 2,000 programmatically generated vector labels	• 50 real Indian commercial FMCG packages
• Exact mathematical millimeter typography	• purchased from local retail markets
• Known PDP areas: 20 to 3,000 cm ²	• Categories: snacks, drinks, cosmetics, soaps
• Known font heights: 1.0 mm to 8.0 mm	• Ground truth measured with digital vernier
• Synthesized noise, tilt (0-30°), glare, blur	• calipers (+/- 0.02 mm) under optical loupe
• Used for: Algorithm verification & testing	• Used for: Final acceptance benchmarking

Why Synthetic Data is NOT Real-World Proof

Synthetic data proves that our code works when math is clean. It does **not** prove that our system works on a crushed potato-chip bag under yellow shop lighting. That is why the **50 physical pilot packages (DS-PILOT-050)** are mandatory for live demonstration.

Filtered Public Datasets Used:

- **Bharat Scene Text Dataset (BSTD):** Used to validate Devanagari Hindi scene text recognition.
- **IndicSTR12:** Used for word-level Indic OCR testing.

16. FINAL TECH STACK

All technology choices are **FROZEN** under formal Architecture Decision Records (ADRs):

Component	Selected Technology	Why We Use It	Owner
Backend Framework	Python 3.11+ with FastAPI	Fast async execution, automatic OpenAPI 3.1 docs, native CV ecosystem	M1-M5
Data Contracts	Pydantic v2	Rust-compiled strict typing; eliminates data coercion bugs	M3-M4
Frontend Framework	React 18+ with Vite & Tailwind	Instant HMR, lightweight bundle, responsive canvas for loupe tool	M6
Computer Vision Engine	OpenCV 4.9+ (Apache-2.0)	Direct Linear Transform homography, ArUco fiducials, Canny edge detection	M1

Component	Selected Technology	Why We Use It	Owner
Text Detection	DBNet++ (Apache-2.0)	Real-time multi-oriented polygon text detection; avoids AGPL YOLO	M2
Text Recognition (OCR)	PaddleOCR PP-OCRv4 (Apache-2.0)	SOTA scene text accuracy for English + Devanagari Hindi; 38 MB footprint	M2
OCR Consensus Fallback	Tesseract v5 (Apache-2.0)	Secondary confirmation on low-confidence cropped text fields	M2
Edge Optimization	ONNX Runtime INT8 (CPU)	Quantized CPU execution; achieves < 1200 ms latency without GPU	M1-M2
Legal Rule Engine	Custom Python AST Engine	100% deterministic boolean logic; zero hallucination; temporal routing	M4
Local Database	SQLite 3.45+ with SQLCipher	Single-file zero-config database with AES-256 encryption at rest	M6
Cloud Database (Prod)	PostgreSQL 16+ with pgcrypto	High-concurrency multi-district production scaling	M6
Notice & Evidence PDF	ReportLab (BSD License)	Precise millimeter layout control for Form-1 notices & BSA certs	M5
Cryptographic Hashing	Python hashlib (SHA-256)	Immutable Merkle DAG provenance chains under Section 63 BSA 2023	M5

17. FINAL ARCHITECTURE (Modular Monolith)

We intentionally reject microservices. The entire application runs as a **Modular Monolith** inside a single FastAPI process:

- No Kafka queues.
- No Docker-in-Docker complexity during field use.
- Instant startup on any student laptop via:

```
uvicorn server.main:app --port 8000
npm run dev --prefix client
```

18. DATABASE

The database schema uses an **Abstract Dialect Pattern** (runs seamlessly on SQLite locally and PostgreSQL in production):

+-----+ ---+ TABLE NAME PURPOSE & CONTENTS +-----+	
---+	
1. `jurisdictions`	State, district, and circle offices (e.g. DL-South, MH-Mumbai).
2. `users`	Officer accounts, badge numbers, hashed passwords, assigned roles.
3. `inspections`	Master inspection sessions: product, brand, timestamp, overall status.
4. `evidence_images` metrics.	Ingested photos, raw SHA-256 hashes, px_to_mm scale, blur/glare
5. `bounding_boxes`	Detected text polygon coordinates, OCR strings, measured font heights.
6. `compliance_evals` mm.	Rule engine findings: rule code, status (PASS/FAIL), measured vs req
7. `bsa_certificates`	Section 63 BSA electronic certificates, device metadata, Merkle roots.
8. `legal_notices`	Form-1/2 notices, reference numbers, compounding amounts, PDF paths.
9. `audit_logs` chain.	Append-only Merkle ledger recording every officer action and hash
+-----+ ---+	

19. API / INTERFACES

Core REST Endpoints:

- **POST /api/v1/auth/login** — Officer authentication; returns JWT.
- **POST /api/v1/inspections/upload** — Ingests raw photo + metadata; returns image ID and quality check.
- **POST /api/v1/inspections/ecommerce** — Ingests product URL or DOM snapshot.
- **POST /api/v1/pipeline/execute/{image_id}** — Runs 12-stage pipeline; returns extracted fields & rule findings.
- **PATCH /api/v1/inspections/{id}/adjudicate** — Officer confirms or overrides findings with mandatory remarks.
- **POST /api/v1/notices/generate** — Generates Form-1 Legal Notice and Section 63 BSA certificate.
- **GET /api/v1/notices/{id}/pdf** — Downloads signed PDF/A document.

Sample Pipeline Response (/api/v1/pipeline/execute/{image_id}):

```
{
  "inspection_id": "insp_8f7b2c14-9d1a-4d2b-a312-c7f3e82d1094",
  "execution_time_ms": 842,
  "calibration": {
    "method": "ARUCO_4X4_50",
    "px_to_mm": 12.45
  },
  "principal_display_panel": {
    "pdp_area_cm2": 144.0,
    "table_1_required_font_mm": 2.5
  },
  "extracted_fields": [
    {
      "field_type": "NET_QUANTITY",
      "raw_text": "Net Wt: 200 gms",
      "measured_font_height_mm": 1.84,
      "confidence": 0.96
    },
    {
      "field_type": "MRP",
      "raw_text": "MRP Rs. 80.00 (incl. of all taxes)",
      "amount": 80.0
    }
  ],

    "measured": "1.84 mm",
    "discrepancy": "Deficit of 0.66 mm (-26.4%)"
  }
],
"overall_verdict": "FAIL"
}
```

20. USER INTERFACE (6 Screens)

1. **Executive Dashboard (/dashboard)**: Real-time inspection counts, compliance rate gauges, violation category charts, and quick-search table.
2. **Inspector Capture HUD (/capture)**: Full-screen mobile viewfinder with ArUco alignment box, tilt gyro indicator (turns green when level), and real-time glare warning toasts.
3. **Adjudication Canvas (/inspect/:id)**: Dual-pane interface. Left: High-resolution zoomable image with color-coded bounding boxes and pixel loupe showing millimeters. Right: Rule ledger showing exact measured deficits.
4. **E-Commerce Auditor (/ecommerce)**: URL paste input, DOM snapshot uploader, Rule 6(10) declaration checklist, and cross-reference widget comparing website claims against packaging images.

- 5. **Legal Notice Generator (/notice/:id):** Form-1 / Form-2 interactive preview, pre-filled statutory contraventions, embedded evidence image crops, and one-click signed PDF export.
- 6. **Admin Diagnostics Console (/admin):** Pipeline latency breakdown chart (ms per stage), detection confidence sliders, and database maintenance tools.

21. SECURITY

- **Role-Based Access Control (RBAC):** Inspectors can capture and draft memos; only Controllers can approve formal notices; Central Admins have read-only macro views.
- **Local Encryption at Rest:** Field databases use **SQLCipher (AES-256)** encryption. If an inspector's tablet is lost or stolen, commercial evidence remains protected.
- **Section 63 BSA Tamper-Proofing:** Every action appends to an immutable SHA-256 Merkle tree. Any file modification breaks the hash chain immediately.
- **Zero Cloud Leakage:** All inference executes locally on device. Data syncs to the central ministry server only over encrypted TLS 1.3 when connected to official networks.

22. FINAL MVP (MoSCoW Prioritization)

-----+-----		
---+		
MUST-HAVE (P0) - FROZEN	SHOULD-HAVE (P1) - STRETCH	WON'T-HAVE (P3) - CUT
LIST		
-----+-----		
---+		
1. Optical Quality Gate (Blur/Glare)	1. Batch CSV URL upload queue	1. Mass web scraping
2. ArUco Homography Scale (\$S\$)	2. EAN-13 Barcode scanner	2. Autonomous penalty
issue		
3. DBNet++ & PP-OCrv4 on CPU	3. Devanagari Hindi OCR testing	3. Weighing package mass
4. Rule 6 & Table-I Rule Engine		4. AGPL YOLO models
5. Adjudication Canvas (Side/Side)		5. FSSAI / Food testing
6. Form-1 PDF Notice Generator		6. Blockchain ledger
7. Section 63 BSA Certificate		7. Commercial cloud APIs
8. Single E-Com URL/Image checker		
9. SQLite Encrypted Local DB		
-----+-----		
---+		

If We Fall Behind Schedule:

- 1. Cut Batch CSV upload (P1).
- 2. Cut EAN-13 barcode parsing (P1).
- 3. Focus 100% on the core **P0 pipeline** (Image Ingestion → Scale → OCR → Rules → Adjudication Canvas → PDF Notice).

23. WHAT WE ARE NOT BUILDING

- 1. **We are NOT building an Autonomous Judge:** AI does not issue fines or prosecute. The human officer signs every notice.
- 2. **We are NOT building a Mass Web Scraper:** No crawling millions of Amazon/Flipkart listings. We inspect targeted URLs and uploaded screenshots.
- 3. **We are NOT building a Digital Weighing Scale:** Software cannot weigh physical goods from a photo.
- 4. **We are NOT building an FSSAI Food Safety Tool:** We do not check ingredients, calories, or organic claims. We enforce Legal Metrology (net quantity, MRP, units, dates, origin, font size).
- 5. **We are NOT using Blockchain:** A SHA-256 Merkle DAG satisfies Section 63 BSA 2023 with zero overhead.
- 6. **We are NOT using Closed Commercial APIs:** Zero dependence on Google Cloud Vision or AWS Rekognition.
- 7. **We are NOT building Full 3D Cylindrical Mesh Unwrapping:** We measure font height along the vertical unwarped axis of bottles and cans.

24. SIX-MEMBER TEAM PLAN

---+	
MEMBER & ROLE	MAIN RESPONSIBILITY & DELIVERABLES

---+	
MEMBER 1	Optics, Calibration & Metrology
	• Ingestion quality gate (blur/glare detection)
	• ArUco & coin planar homography scale engine
	• Principal Display Panel (PDP) surface area calculator
	• Connected-components font x-height physical measurement
	Delivers: `core/quality_gate/` and `core/homography/` modules

---+	
MEMBER 2	Deep Learning & OCR Pipeline
	• DBNet++ multi-oriented text polygon detection

	• PaddleOCR PP-OCRv4 text recognition (English + Hindi) • Tesseract v5 secondary consensus fallback • ONNX Runtime INT8 CPU quantization & performance tuning Delivers: `core/ocr_engine/` module with benchmark scripts
MEMBER 3	Extraction & NLP Parsing • Regex token normalizer (MRP, Net Qty, Dates, USP) • Prohibited metric unit detector (flags 'gms', 'ML') • 2D spatial proximity graph (K-D tree) for key-value association • Indian postal address segmenter & PIN code verifier • Consumer Care 4-tuple completeness checker Delivers: `core/extractor/` module with unit test suite
MEMBER 4	Statutory Logic & Legal Rule Engine • Immutable JSON rule snapshots (2011 Base, 2017 Font, 2021 USP, 2023 JV) • Temporal Statutory Epoch Dispatcher (by Mfg Date) • Table-I font-height evaluator & Net Qty clearance checker • Unit Sale Price arithmetic verifier ($USP * Qty - MRP \leq 0.02$) • 4-State Epistemic Verdict Triage (PASS/FAIL/REVIEW/UNABLE_TO_VERIFY) Delivers: `core/rule_engine/` module & statutory test suites
MEMBER 5	Security, Cryptography & Notice Generator • SHA-256 Merkle DAG provenance graph • Section 63 BSA 2023 Electronic Evidence Certificate generator • ReportLab Form-1 / Form-2 Legal Notice PDF/A generator • Device telemetry, GPS binding, and verification QR code Delivers: `core/evidence/` module & PDF generation engine
MEMBER 6	Frontend, Integration & Demo Orchestration • React 18 + Vite UI (Dashboard, Capture HUD, Adjudication Canvas) • Real-time camera viewfinder with blur/glare HUD guidance • Interactive pixel loupe tool with real-time millimeter readout • Local encrypted SQLite database integration • 50-package physical pilot evaluation & demo launch scripts

| Delivers: `client/` frontend application & full system packaging

25. HOW WE WORK IN PARALLEL

CONTRACT-FIRST PARALLEL WORKFLOW

Day 1: All 6 agree on DTO JSON schemas (API Contracts)

|

└─> Member 1 builds Homography using sample tilted photos

└─> Member 2 builds OCR pipeline using cropped image patches

└─> Member 3 builds Regex Parsers using raw OCR JSON mocks

└─> Member 4 builds AST Rule Engine using normalized fact JSON mocks

└─> Member 5 builds PDF Notice Generator using rule finding JSON mocks

└─> Member 6 builds React UI components using static API mocks

|

Day 4: Integration Checkpoint: Connect modules together (Contracts already match!)

The Golden Rule: You do **NOT** wait for another member to finish their code before starting yours.

- Use the agreed JSON schemas in `07_API_AND_INTERFACE_CONTRACTS.md`.
- Test your code against mock data fixtures.
- When we connect on Day 4, the pieces fit together seamlessly.

26. GITHUB WORKFLOW

- **Repository:** `sih26034-nyayadrishti`
- **Main Branch (main):** Demo-safe, production code. Pushing directly to `main` is strictly forbidden.
- **Development Branch (dev):** Integration branch. All features merge here first.
- **Feature Branches:** Named as `feat/m<number>-<name>` (e.g., `feat/m1-homography`, `feat/m4-rule-engine`).

- **Pull Request (PR) Policy:**
 - Must solve a specific requirement ID.
 - Must pass all local unit tests.
 - Must be reviewed by at least one other team member.
 - Zero AGPL-3.0 dependencies permitted.
-

27. DEFINITION OF DONE (DoD)

A task or feature is **DONE** if and only if:

Code + Unit Tests + Schema Conformance + Latency Check + Docs = **DONE**

1. **Schema Match:** Output strictly matches the JSON contract in `07_API_AND_INTERFACE_CONTRACTS.md`.
 2. **Unit Tested:** Passes unit tests with $> 85\%$ test coverage on logic.
 3. **Speed Budget:** Runs on laptop CPU within its allocated latency budget.
 4. **No Crashes:** Handles invalid or corrupted inputs gracefully without crashing.
 5. **Integrated:** Connected to the central test runner.
-

28. TESTING & VALIDATION

The 4-Tier Test Pyramid:

- **Tier 1 (Unit):** Regex syntax, rule boolean predicates, USP floating-point math.
- **Tier 2 (Metrology):** ArUco scale derivation and font height vs. vernier caliper ground truth.
- **Tier 3 (Integration):** Multi-stage pipeline flow, quality gate rejection, latency budget.
- **Tier 4 (Physical Pilot Acceptance):** Running the complete system on all **50 real-world FMCG pilot packages** (DS-PILOT-050).

Key Acceptance Benchmarks:

- Font measurement Mean Absolute Error (MAE): ≤ 0.30 mm (Target: ≤ 0.15 mm).
 - OCR Character Error Rate (CER): $\leq 2.5\%$ on clear printed text.
 - Rule Engine False Positive Rate (falsely accusing a compliant pack): 0.0%.
 - Total Pipeline Latency: < 1200 ms on 8-core CPU.
-

29. PERFORMANCE & SUCCESS METRICS

Metric Category Specific Metric Target Value		
Model & Vision Metrics	Character Error Rate (CER)	<= 2.5% on clean statutory text
	Bounding Box IoU	>= 92.0% on text clusters
	Font Measurement Error (MAE)	<= 0.30 mm (Target: <= 0.15 mm)
System Performance Metrics	End-to-End Latency	<= 1200 ms on 8-core CPU
	RAM Footprint	<= 800 MB total resident memory
	Offline Availability	100% functional without internet
Legal & Enforcement Metrics	Rule Statutory Traceability	100% (Every finding cites Gazette)
	False Accusation Rate	0.0% (Zero autonomous false notices)
	Section 63 BSA Admissibility	100% (Complete SHA-256 Merkle DAG)
Workflow Efficiency Metrics	Inspection Cycle Time	< 45 seconds (down from 8 minutes)
	Notice Generation Speed	< 2 seconds for complete PDF/A

30. TOP RISKS & RED-TEAM MITIGATIONS

Risk & Threat Protocol Why It Happens How We Detect It Contingency			
TR-01: Scale Ambiguity (Attempting mm without card) uncalibrated;	Photo taken without marker	ArUco detection	Protocol ALPHA:
	or placed out-of-plane.	returns null.	Switch to
			evaluate text
TR-02: Specular Glare (Foil reflection blocks OCR)	Shiny metallic pouches	HSV saturation on	Protocol BETA:
	reflect ceiling lights.	text crop > 3%.	Red warning
			toast;

The 3-Tier Demo Architecture

1. **Tier 1 (Live Primary):** Live physical camera capture of real biscuit/snack boxes on the judging podium with ArUco reference card.
2. **Tier 2 (Simulated Video Backup):** Pre-recorded high-resolution video stream feeding into the live pipeline, immune to podium lighting glare.
3. **Tier 3 (Emergency Golden Static):** 5 pre-computed golden inspection records with pre-generated Section 63 BSA PDF dossiers loaded in the local database.

The 3-Minute Live Judging Pitch Script

- **0:00 - 1:00 (Leader):** Hold up real packaging. Explain the 8-minute manual inspection bottleneck and the scientific impossibility of measuring millimeters without a scale reference. Introduce NyayaDrishti-LM.
- **1:00 - 2:00 (Members 1 & 6):** Snap live photo with ArUco card. Show quality gate passing, ArUco detection, and live pipeline execution. Show detected violations: font deficit, banned **gms**, and USP math error.
- **2:00 - 3:00 (Members 4 & 5):** Show officer review canvas. Explain why AI does not issue fines alone. Click "Confirm", show instant Section 63 BSA Merkle DAG generation, and display the official Form-1 Legal Notice PDF.

5 Golden Test Packages for Demonstration:

1. **SKU-DEMO-01** (Biscuit Box): Font height violation (1.84 mm vs 2.50 mm) + Banned unit **gms**.
 2. **SKU-DEMO-02** (Curry Pouch): USP math mismatch + Missing customer care email.
 3. **SKU-DEMO-03** (Water Bottle): Fully compliant packaging (Clean **PASS** across all clauses).
 4. **SKU-DEMO-04** (Soap Box): Borderline font height (2.46 mm vs 2.50 mm) triggering **REQUIRES_REVIEW**.
 5. **SKU-DEMO-05** (Chips Pouch): Harsh glare triggering **UNABLE_TO_VERIFY** and recovery advice.
-

32. JUDGE QUESTIONS (Cheat Sheet)

Legal Domain Questions:

- **Q: How do you know what font height is legally required?**
 - *Answer:* "We calculate the Principal Display Panel (PDP) surface area first. Under Table-I of Rule 7(2), a PDP area of 100 to 500 cm² mandates a minimum numeral height of 2.5 mm for packs ≤ 200g, and 4.0 mm for packs > 200g."
 - *What NOT to say:* Never say "Our AI classified it as small font."
- **Q: Does your system issue automated penalties?**

- *Answer:* "No. Under Indian administrative law and Sections 15 & 36 of the Act, statutory power rests exclusively with appointed human officers. Our software is an investigative decision-support tool that prepares draft inspection memos for the officer's sign-off."
- **Q: What about Section 65B of the Evidence Act?**
 - *Answer:* "Section 65B was repealed on 1 July 2024. Our system generates digital certificates compliant with **Section 63 of the Bharatiya Sakshya Adhiniyam, 2023 (BSA 2023)**, using SHA-256 Merkle hash chaining."

Technical & AI Questions:

- **Q: How can you measure millimeters from a smartphone photo?**
 - *Answer:* "We do not measure uncalibrated photos because projective geometry makes that mathematically impossible. We place a coplanar reference target (ArUco marker or ₹5 coin) of known size in the frame and solve the planar homography matrix H , establishing an exact mm/pixel scale."
- **Q: Why not use GPT-4o or Gemini to inspect the label?**
 - *Answer:* "Large Language Models are non-deterministic, hallucinate numbers, cannot measure physical geometry, and cannot run offline in rural wholesale markets. We use a hybrid architecture: deep learning observes text, deterministic rules verify the law."
- **Q: What happens if an image is blurry or has glare?**
 - *Answer:* "Our optical quality gate rejects frames where blur variance is < 150 or glare covers $> 3\%$ of the label, returning **UNABLE_TO_VERIFY** and instructing the officer to tilt the camera."

33. CLAIMS WE MUST NEVER MAKE (The Blacklist)

★ **MUST KNOW:** Any team member who makes these claims during judging will hurt the team's credibility.

- ✗ **NEVER SAY:** "Our AI measures font millimeters directly from any normal photo."
 - ✓ **SAY INSTEAD:** "We derive physical millimeter scale using planar homography anchored to a coplanar reference target of known dimensions (ArUco marker or ₹5 coin)."
- ✗ **NEVER SAY:** "Our AI acts as a judge and automatically fines the shopkeeper."
 - ✓ **SAY INSTEAD:** "NyayaDrishti-LM is an investigative decision-support tool that drafts statutory notices; final legal sign-off rests with the authorized officer."
- ✗ **NEVER SAY:** "Our software detects if the package has less weight inside than declared."
 - ✓ **SAY INSTEAD:** "A camera sees surface ink, not mass. Short-weight detection requires physical weighing under Rule 24, which our workflow prompts when Net Quantity syntax is verified."
- ✗ **NEVER SAY:** "All products on Amazon must declare manufacturing date."

- ☒ **SAY INSTEAD:** "Rule 6(10) explicitly exempts e-commerce listings from declaring the month and year of manufacture."
 - 5. ☒ **NEVER SAY:** "We trained our own foundation AI model from scratch."
 - ☒ **SAY INSTEAD:** "We fine-tuned and quantized proven open-source architectures (DBNet++ and PaddleOCR PP-OCRv4) to run on CPU via ONNX Runtime."
 - 6. ☒ **NEVER SAY:** "We scrape millions of Amazon products daily."
 - ☒ **SAY INSTEAD:** "Our e-commerce module audits single URLs, DOM snapshots, or uploaded listing screenshots provided by officers for targeted scrutiny."
 - 7. ☒ **NEVER SAY:** "Table-I Row 5 requires 8.0 mm font for blown bottles."
 - ☒ **SAY INSTEAD:** "Gazette Notification G.S.R. 629(E) sets Row 5 at 6.0 mm for both normal and blown containers."
 - 8. ☒ **NEVER SAY:** "Our report is guaranteed to win in court."
 - ☒ **SAY INSTEAD:** "We produce court-admissible electronic evidence structured under Section 63 of the Bharatiya Sakshya Adhiniyam, 2023."
-

34. DAILY DEVELOPMENT PLAN (07 - 13 September 2026)

```
=====
==
DAY 1 (07 Sep): SKELETON, DATABASE & DTO CONTRACTS
- M1: OpenCV ArUco detector & test script with sample card photos.
- M2: Download PP-OCRv4 & DBNet++ weights; export initial ONNX models.
- M3: Implement deterministic regex parsers for MRP, Net Qty, and banned units.
- M4: Code AST rule engine and Table-I lookup logic in Python.
- M5: Implement SHA-256 Merkle DAG hashing class and test with mock payloads.
- M6: Initialize React + Vite project with Tailwind and basic screen routing.
Checkpoint: All DTO schemas pass validation; repository skeleton live on GitHub.
=====
==
DAY 2 (08 Sep): CORE ALGORITHMS & PRE-PROCESSING
- M1: Implement Laplacian blur estimator and HSV glare mask filter.
- M2: Implement DBNet++ polygon extraction and patch cropping.
- M3: Build 2D spatial proximity graph (K-D tree) linking MRP to tax suffix.
- M4: Implement Unit Sale Price math checker and temporal epoch dispatcher.
- M5: Build ReportLab Form-1 PDF template and embed raw image exhibits.
- M6: Build Camera Viewfinder HUD with real-time ArUco overlay box.
Checkpoint: Quality gate rejects blurry images; homography rectifies test photos.
=====
==
DAY 3 (09 Sep): OCR & METROLOGY PIPELINE
- M1: Implement connected-components font x-height measurement in mm.
- M2: Connect DBNet++ to PaddleOCR PP-OCRv4 with Latin & Devanagari dictionaries.
- M3: Implement Consumer Care 4-tuple parser and Indian postal PIN code regex.
- M4: Connect extractor outputs to AST rules; verify Table-I compliance logic.
- M5: Implement Section 63 BSA certificate generator with officer signature block.
- M6: Build Side-by-Side Adjudication Canvas with pan/zoom and bounding boxes.
Checkpoint: Calibrated font measurement achieves MAE <= 0.15 mm on test target.
=====
==
DAY 4 (10 Sep): P0 INTEGRATION & FEATURE FREEZE (CRITICAL PATH)
- ALL MEMBERS: Connect Stage 1 through Stage 12 into unified FastAPI backend.
- Wire React frontend to live backend inspection API.
```

```
- Execute Caliper Benchmark on 20 pilot packages; tune character confidence floors.
- CODE FREEZE on P0 features by 20:00 IST. Zero new features permitted.
Checkpoint: Complete end-to-end run: image upload -> review canvas -> signed PDF.
=====
==
DAY 5 (11 Sep): E-COMMERCE AUDITOR & POLISH
- M3 & M4: Build E-commerce single URL / DOM parser auditing Rule 6(10) & 6(10A).
- M5: Polish Form-1 Legal Notice PDF styling and embed verification QR code.
- M6: Polish Executive Dashboard KPI cards and dark/light mode toggle.
- M1 & M2: Final ONNX INT8 CPU benchmark; verify latency < 1200 ms.
Checkpoint: E-commerce audit functional; notice PDFs render in < 2 seconds.
=====
==
DAY 6 (12 Sep): STRESS TESTING, CALIBRATION & DEMO REHEARSALS
- ALL MEMBERS:
  1. Run complete 20-suite test pyramid across all 50 FMCG pilot packages.
  2. Record 1080p Virtual Video Stream backup (Tier 2 demo safety).
  3. Pre-generate and verify Tier 3 golden static dossiers in SQLite.
  4. Conduct 5 full dry-run presentations following the 3-minute pitch script.
  5. Remove all debug print statements, console logs, and temporary files.
Checkpoint: 5 out of 5 mock presentations executed flawlessly within 3 minutes.
=====
==
DAY 7 (13 Sep): FINAL SUBMISSION & LIVE EVALUATION GATE
- Deploy production build to team laptops; verify 100% offline functionality.
- Package code, documentation, and slides; complete SIH portal submission.
- Deliver winning live demonstration to Department of Consumer Affairs jury!
=====
==
```

35. IF WE FALL BEHIND (Emergency Triage)

IF UI FEATURE IS DELAYED:

—> Cut dashboard graphs; protect the core Adjudication Canvas and PDF generator at all costs.

36. PROJECT GLOSSARY

- **Legal Metrology:** The statutory regulation of weights, measurements, and packaging labels for consumer protection.
 - **PDP (Principal Display Panel):** The main face of a package containing the brand name and net quantity, governing required font size.
 - **Table-I:** The official statutory schedule in Rule 7 prescribing minimum font heights (1.0 to 6.0 mm) based on PDP area.
 - **USP (Unit Sale Price):** The price per gram, milliliter, kilogram, or liter, mandatory on all retail packages to allow price comparison.
 - **Planar Homography (H):** A geometric 3×3 transformation matrix used to mathematically straighten an angled photo to a flat view.
 - **ArUco Marker:** A standardized black-and-white grid pattern of known physical size used as a camera scale reference.
 - **OCR (Optical Character Recognition):** Technology that converts printed letter pixels into machine-readable text strings.
 - **Rule Engine:** Software that evaluates fixed legal boolean conditions and math against extracted facts without AI guessing.
 - **AST (Abstract Syntax Tree):** A structured, tree-like mathematical representation of legal rules and conditions.
 - **Section 63 BSA 2023:** The modern Indian law governing the admissibility of electronic evidence in court, replacing repealed Section 65B.
 - **Merkle DAG:** A cryptographic tree of SHA-256 hashes proving that digital records have not been altered or tampered with.
 - **RBAC:** Role-Based Access Control, restricting system actions based on officer credentials.
 - **INT8 Quantization:** Compressing neural network weights from 32-bit floats to 8-bit integers, accelerating CPU inference by $3\times$.
 - **ONNX Runtime:** A high-performance cross-platform engine for executing machine learning models on CPUs.
 - **Laplacian Variance:** A mathematical formula used to measure image sharpness and detect motion blur in under 10 milliseconds.
-

37. IF YOU ONLY REMEMBER 20 THINGS

1. **The Goal:** Build an offline field tool for Legal Metrology Officers to verify packaged goods in 30 seconds.
 2. **The Ministry:** Ministry of Consumer Affairs, Food & Public Distribution (DoCA).
 3. **The Core Law:** Legal Metrology Act, 2009 & Legal Metrology (Packaged Commodities) Rules, 2011.
 4. **The Evidence Law:** Section 63 of the Bharatiya Sakshya Adhiniyam, 2023 (BSA 2023). Indian Evidence Act 1872 is repealed!
 5. **AI Observes, Rules Verify, Humans Decide:** AI reads pixels; rules check the law; human officers sign notices.
 6. **No Millimeters Without a Marker:** Photos have pixels, not millimeters. We use an ArUco card or coin to calculate scale.
 7. **Table-I Row 5 Boundary:** For $PDP > 2500 \text{ cm}^2$, required font height is **6.0 mm** (not 8.0 mm).
 8. **E-Commerce Exemption:** E-commerce listings are legally exempt from displaying manufacturing date under Rule 6(10).
 9. **E-Commerce 2026 Mandate:** Searchable Country of Origin filter is mandatory from 1 July 2026 under Rule 6(10A).
 10. **Banned Units:** **gms**, **gm**, **Kgs**, **ML**, **ltrs** are illegal under Section 11. Only official SI units (**g**, **kg**, **ml**, **l**) are legal.
 11. **Unit Sale Price Math:** $USP \times NetQty$ must equal MRP within ₹0.02.
 12. **Consumer Care Checklist:** Must contain Contact Person/Office, Address, Telephone Number, AND Email Address.
 13. **No AGPL Software:** Ultralytics YOLO is banned due to copyleft licensing. We use Apache-2.0 DBNet++ and PaddleOCR.
 14. **100% Offline Capable:** Runs on standard laptop CPUs via ONNX INT8 quantization with zero cloud API dependence.
 15. **Four Result States:** **PASS**, **FAIL**, **REVIEW**, and **UNABLE_TO_VERIFY**.
 16. **Quality Gate Filter:** Blurry photos or photos with $> 3\%$ glare are rejected before running OCR.
 17. **Tamper-Proof Evidence:** Every inspection is sealed into a SHA-256 Merkle DAG and exported as a Form-1 PDF notice.
 18. **No Weighing Claims:** We inspect printed labels; we do not weigh package mass.
 19. **No Mass Scraping:** We inspect targeted URLs, DOM snapshots, and uploaded images—no automated scraping bots.
 20. **Hard Deadline:** 13 September 2026. P0 code freeze on 10 September 2026 (Day 4).
-

38. TEAM LEADER CHEAT SHEET (For Standups & Meetings)

Daily 10-Minute Standup Agenda (Every Morning at 09:00 IST):

1. What did you deliver yesterday that matches your JSON contract?

2. What unit tests are passing today?
3. What is blocking your interface with the next team member?
4. Are you introducing any AGPL-3.0 or cloud dependencies? (Strictly forbid!)

Critical Path Dependencies:

- **Member 1** → **Member 2**: Member 2 needs rectified planar images from Member 1 to run OCR.
- **Member 2** → **Member 3**: Member 3 needs OCR text tokens from Member 2 to extract fields.
- **Member 3** → **Member 4**: Member 4 needs normalized entity facts from Member 3 to evaluate rules.
- **Member 4** → **Member 5**: Member 5 needs rule findings from Member 4 to generate the PDF notice.
- **Member 6** → **All**: Member 6 provides the UI canvas where all these pieces connect.

What the Leader Must NEVER Allow:

- Never allow someone to "experiment with a new cloud API" or "test a generic LLM prompt."
- Never allow unverified changes to the frozen DTO schemas.
- Never allow anyone to push broken code directly to `main`.
- Never allow a team member to say "it works on my GPU" if it fails on CPU.

39. START DEVELOPMENT FROM HERE (Immediate Next Actions)

```
=====
==
DAY 1 IMMEDIATE TASK ASSIGNMENTS:

MEMBER 1:
1. Initialize `core/homography/` and `core/quality_gate/`.
2. Write a Python script using OpenCV to detect ArUco 4x4_50 marker and compute homography H.
3. Test on 3 sample packaging photos taken with a printed ArUco marker.

MEMBER 2:
1. Initialize `core/ocr_engine/`.
2. Download PaddleOCR PP-OCRv4 ONNX models (detection & recognition).
3. Benchmark inference time on CPU with an INT8 quantized test patch.

MEMBER 3:
1. Initialize `core/extractor/`.
2. Author deterministic regex patterns for MRP, Net Quantity, Dates, and prohibited units ('gms').
3. Run pytest against 20 mock packaging string fixtures.

MEMBER 4:
1. Initialize `core/rule_engine/`.
2. Create `rules_2017_gsr_629.json` and `rules_2021_gsr_779.json`.
3. Implement Table-I font schedule evaluation function and USP math validator.
```

```
MEMBER 5:
1. Initialize `core/evidence/`.
2. Build SHA-256 Merkle DAG class linking raw image hash to inspection findings.
3. Build ReportLab Form-1 Legal Notice PDF script with dummy text and evidence image crop.

MEMBER 6:
1. Initialize `client/` using `npm create vite@latest client -- --template react`.
2. Install Tailwind CSS and Lucide Icons.
3. Set up the 3 primary screens: Dashboard, Capture Viewfinder, and Adjudication Canvas.
=====
==
```

40. IMPORTANT CORRECTIONS & UPDATES MADE DURING GUIDE CREATION

+-----+ ---+ OLD ASSUMPTION / DRAFT CLAIM CORRECT VERIFIED FACT WHY CORRECTION WAS MADE & SOURCE +-----+		
---+ Table-I Row 5 blown container font confirms height is 8.0 mm (Phase 1 typo). mm.	Correct height is **6.0 mm** for both normal and blown packs.	Gazette G.S.R. 629(E) Row 5 (> 2500 cm²) is 6.0
+-----+		
---+ Electronic evidence governed by was Section 65B Indian Evidence Act. by BSA.	Governed exclusively by **Section 63 BSA 2023**.	Indian Evidence Act 1872 repealed on 1 July 2024
+-----+		
---+ E-commerce listings must declare exempts month and year of manufacture. com. 	E-commerce listings are **statutorily exempt** from mfg date on webpage.	Rule 6(10) explicitly manufacturing date on e- com.
+-----+		
---+ Software can measure physical mm ambiguity directly from any smartphone photo. reference homography.	Monocular single photo has scale ambiguity; **requires known reference (ArUco/coin)**.	Projective scale requires a coplanar target for metric
+-----+		
---+ Ultralytics YOLOv8/v11 selected for opening of packaging panel detection. replaced RT-DETR.	YOLO strictly banned due to **GNU AGPL-3.0** viral copyleft.	AGPL copyleft forces government source code; by Apache-2.0 DBNet++ &

41. REMAINING OPEN QUESTIONS (Bounded by Safe Defaults)

- **OQ-01: ArUco Marker vs Standard Credit-Card-Sized Reference (ISO 7810 ID-1):**
 - *Working Default:* Implement dual OpenCV detection: ArUco 4x4_50 is primary; standard ID-1 card contour detection is automatic fallback.
- **OQ-02: Minimum Manufacturer Address Tokens Required for Violation:**
 - *Working Default:* Must contain State + 6-digit PIN code. Missing street line triggers **REQUIRES_REVIEW** rather than a hard fail.
- **OQ-03: eMaap National Portal REST API Schema:**
 - *Working Default:* Since **emaap.gov.in** has no public API, export standardized Form-1 JSON payload matching statutory inspection memo fields, ready for future webhook integration.
- **OQ-04: Cylindrical Packaging Text Dewarping:**
 - *Working Default:* Restrict physical font height measurement to the vertical unwarped axis of the cylinder (zero distortion). Deferred full 3D surface mesh unwrapping to post-hackathon roadmap.
- **OQ-05: Deployment Packaging:**
 - *Working Default:* Cross-platform React + Vite PWA wrapped in Electron for laptop evaluation, with standard responsive viewport allowing execution on Android tablets.

42. SOURCE MAP (Index of Authoritative Repository Documents)

+-----+	
---+	
FILE NAME	PRIMARY AUTHORITY & CONTENT SCOPE
+-----+	
---+	

`01_MASTER_PROJECT_BLUEPRINT.md`	Executive architectural synthesis and SSOT summary.
`02_FINAL_REQUIREMENTS_SPECIFICATION.md`	Master requirements (FR-01 to FR-20, NFR-01 to NFR-10).
`03_FINAL_ARCHITECTURE.md`	Modular monolith architecture & 12-stage pipeline flow.
`04_FINAL_MVP_SCOPE.md`	MoSCoW prioritization, P0 frozen scope & explicit cut list
`05_TECHNOLOGY_DECISION_RECORD.md`	Formal ADRs (ADR-01 to ADR-12) covering stack choices.
`06_DATA_AND_MODEL_STRATEGY.md`	DS-SYNTH-001, DS-PILOT-050, ONNX INT8 & license audits.
`07_API_AND_INTERFACE_CONTRACTS.md`	OpenAPI 3.1 REST schemas & Pydantic v2 pipeline DTOs.
`08_DATABASE_SPECIFICATION.md`	Relational DDL, SQLite/PostgreSQL schemas & indexing.
`09_UI_UX_BLUEPRINT.md`	Design tokens, mobile HUD wireframes & review canvas.
`10_SECURITY_AND_AUDIT_SPECIFICATION.md`	RBAC matrix, Section 63 BSA 2023 & Merkle audit ledger.
`11_TESTING_AND_VALIDATION_PLAN.md`	4-tier test pyramid, 20 test suites & acceptance metrics.
`12_DEMO_PLAN.md`	3-tier presentation fallback architecture & pitch script.
`13_SIX_MEMBER_EXECUTION_PLAN.md`	Granular workstreams, APIs, and tasks for 6 developers.
`14_GITHUB_WORKFLOW.md`	Trunk-based branching, PR policy, CI checks & DoD.
`15_RISK_AND_CONTINGENCY_REGISTER.md`	10 red-team failure modes, tripwires & mitigations.
`16_DECISION_LOG.md`	Architectural Decision Log (ADL-01 to ADL-12) & reasons.
`17_OPEN_QUESTIONS.md`	Strictly bounded open questions with safe working defaults
`CLAIMS_WE_MUST_NOT_MAKE.md`	Blacklist of unsupported, legally hazardous claims.
`PHASE_1_SIH26034_Domain_Research...`	Deep legal metrology statutory analysis & domain audit.
`PHASE_2_RESEARCH_REPORT.md`	Landscape research, technology benchmarking & data gaps.
`PHASE_3_SOLUTION_BLUEPRINT.md`	Comprehensive system engineering specification.
+-----+ ---+	

End of Master Guide. All 6 members proceed to Day 1 task execution immediately.
